

What is erosion?

Erosion is the wearing away and reshaping of the earth. It can happen quickly or slowly.

Cole

What forces cause erosion?

Wind causes erosion by blowing sand and rocks with bigger rocks. The sand will break off pieces of rock.

Water causes erosion by going into rocks and freeze. The water will break the rock.

Ice causes erosion by sliding down. Cracking pieces of rock.

Jacey-Ann

Fast Process

This kind of change takes a short time like a few moments or few days.

Slow Process

Slow process takes a long time ,
like millions of years.

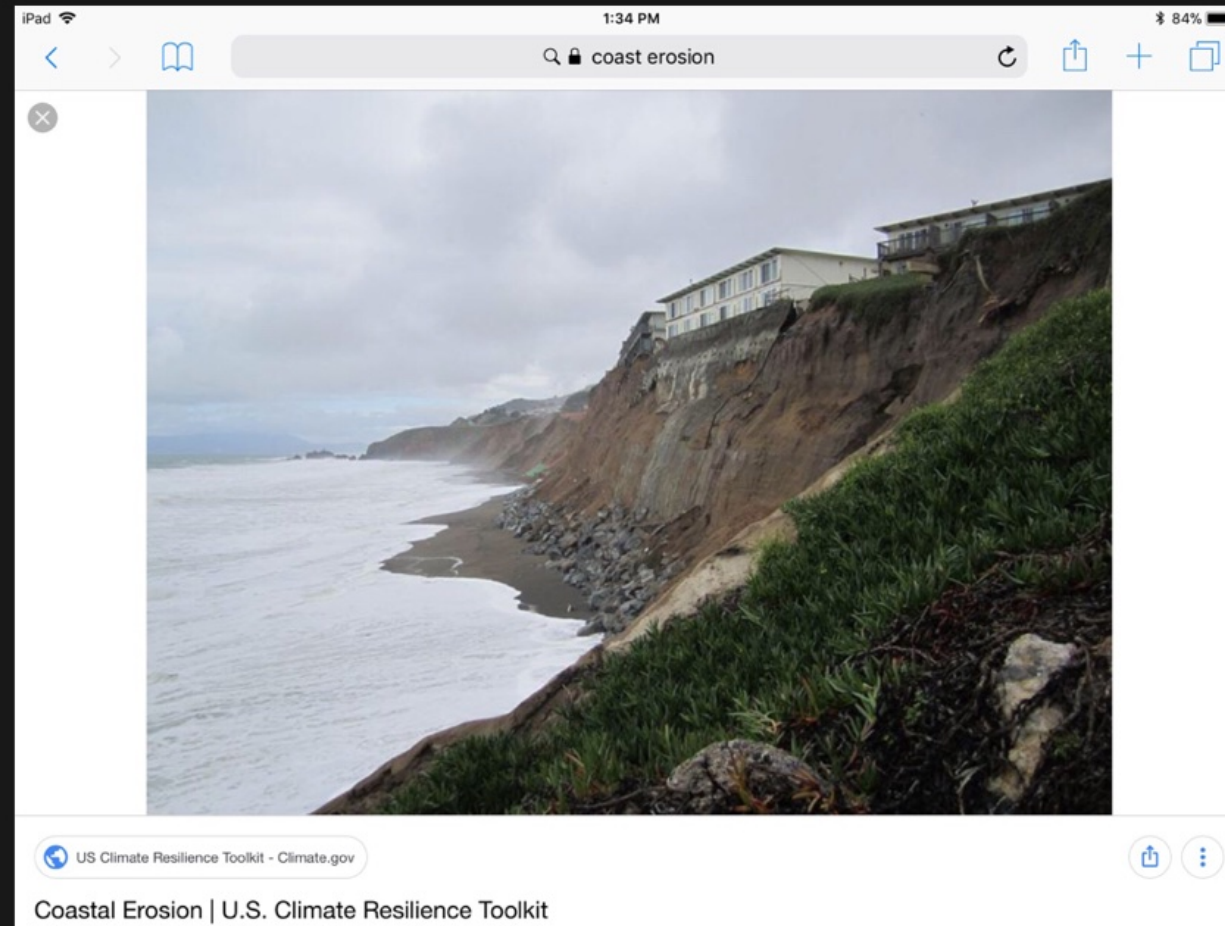

Aniyah

Canyon Erosion

This is a slow process of erosion . Water carries pieces of rocks and that forms a canyon erosion.

Coastal Erosion

This is another example of a slow process. Moving waves cause this kind of erosion

How is erosion effecting local people and beaches.

Erosion is effecting beaches and making them disappear they are taking sand and the homes are falling

Disappearing
